LAMP Enterprise, replaces ORACLE

at Columbia Autocar Corporation (CAC)

INQUIRER.net

Posted date: October 24, 2008

MANILA (Philippines) – Columbia Autocar Corporation (CAC), exclusive distributor of KIA automobiles and parts in the Philippines went live with LAMP Enterprise after having been to be with Oracle for several years. LAMP Enterprise is Impart Solutions' flagship product is complete Enterprise Resource Planning (ERP) solution delivered as Software as a Service (SaaS) over the Internet from two data centers in the Philippines and the United States.

The modules implemented at CAC are Web Ordering, Inventory, Planning and Accounts Receivable modules on LAMP Enterprise, replacing its antiquated ORACLE system; to improve its supply chain and better service its growing members of dealers and clients nationwide. With Impart Solutions domain expertise in ERP, they were able to accomplished this at a record breaking shortest ERP implementation of two (2) weeks at a fraction of the cost of implementing other ERP solutions.

With LAMP Enterprise, CAC's primary users i.e. KIA Dealers, can now inquire nationwide the availability of parts and order direct from CAC via the web ordering facility. The orders coming from web ordering are converted directly to an electronic sales order at CAC thereby eliminating the traditional long processes of sales order booking and fulfillment via traditional means like fax and email.

LAMP Enterprise is a fully functional and integrated ERP solution that includes financials, sales and advanced distribution, service, inventory management, HR, Payroll with biometrics and manufacturing and planning. Built from the ground up using open source technology and delivered as Software as a Service, anytime, anywhere over the internet and smart PDA's like Blackberry, Nokia, and Apple iPhones, LAMP Enterprise provides the robust systems and functionality you can find in large ERP products at a fraction of the cost.

The subscription model of SaaS is based on a per-user basis that eliminates the expensive hardware maintenance, upgrades, license cost, internal and external IT support cost of maintaining traditional ERP solutions available in the market today. Support such as help desk support, security, backup and recovery, upgrades, maintenance and server support are the fundamental features of the SaaS model.

About Impart Solutions
