

# LAMP Inventory

*The Light at the End of the Tunnel*

Inventory provides accurate, real-time inventory information at any of your warehouse locations allowing management to effectively monitor and track item availability and usages from the time you receive an item from a supplier to the time you ship the product to a customer.

## Inventory Features

### Flexible Inventory Structure

LAMP's Item Master offers an a daptable solution that enables you to define your inventory items according to your requirements. Item properties and controls such as style, location, lot, status and grade offers in-depth item level tracking.

### Robust Inventory Transactions

Inventory enables your organization to enter various transactions with full control of the transaction's functions through the use of reason codes. Inventory transaction allows receiving, issuance, product requests, transfer, and item assignment functionalities to be effectively entered and tracked.

### Lot Genealogy

Inventory offers superior item tracking capabilities for lot controlled items, enabling you to track all the lot number components that went into creating a product providing detailed traceability.

### Integration with Purchasing and Production

Inventory facilitates receiving of items purchased from the supplier through its direct integration with purchasing. With the integration with Production, finished goods are added to inventory as soon as the production batch is completed. These features allow inventory to be automatically updated with expected receipts referenced from the purchase order delivery details.

### Real-Time tracking of item availability

Inventory offers various reports and inquiries providing the facility to effectively monitor and track the status of each item.

### Physical and Cycle Count

Inventory facilitates your organization's counting procedures through automatic generation of count tags based on ABC rankings specified.

### Planning Integration

Inventory is directly linked with LAMP planning module offering the facility to create forecasts and maintain optimum inventory levels.

### Costing and Financial Integration

As part of LAMP's integrated system, all inventory transactions are directly linked to GL account mappings that will automate creation of accounting entries. Different costing and valuation methods are incorporated into inventory taking into account the item's cost and financial impact of every transaction.

## Benefits of using Inventory

- Integrates inventory information with other LAMP modules (Financials, Production, Purchasing, Quality, Sales, and Advance Distribution) for end-to-end visibility
- Supports various customer requirements in defining warehouse, and item structures
- Customizable transactions through the use of reason codes to easily adapt to business requirements

## Benefits of Using LAMP

### Ease of Use

LAMP Enterprise, as a web-enabled application is easy to use. Its embedded workflows make learning curve shorter.

## Availability

LAMP Enterprise is engineered to be a web-enabled business software with PDA support in order for it to work on any platform with a web browser, or internet enable phones like Blackberry, iPhone and Smart-Phone. The availability of internet through phones, 3G and wifi make LAMP Enterprise available anytime, anywhere in the world.

## Support

Not only do you get software, you get a team of professionals to handle your questions, maintain the system, and perform your backups. It's like having your own IT department without all the costs associated with it.

## Flexibility

LAMP can be configured precisely to match the needs of each customer eliminating the need for large information technology investments. Choosing from a full menu of LAMP-managed business functions, customers can integrate all of the available applications or simply implement their desired functions a la carte.
