

LAMP for Automotives

The Light at the End of the Tunnel

LAMP Enterprise caters to the needs of automotive sales and services companies in delivering the best services to the customers to build successful business relationships.

LAMP Enterprise Sales module addresses the need for vehicle and parts sales requirements which are integrated to the Accounts Receivable system. Daily revenue information of all branches whether company-owned or franchises are immediately available.

The Services module of LAMP Enterprise enables easy processing of customer repairs and maintenance requirements and aids in preparing Job estimates.

LAMP for Automotive Benefits

Customer Satisfaction

All customer concerns and repair requirements are logged in the system to guarantee that customers get the appropriate service they need.

History Tracking

History of vehicle issues and repairs are available, regardless of which branch it was brought in for service. This allows branches to “look into the past jobs/repairs and parts replacement” and help them in providing better service to the customer.

Job/Service Order Inquiry in Real-Time

LAMP Enterprise provides a repository of information needed to complete job/service orders. The Job/Service inquiry feature enables immediate searching and tracking of job/service status and details.

Service Parts Availability

When a service part is not available in your own warehouse, LAMP Enterprise can provide the information by verifying its availability from

other distributors or dealers. This can help in completing the Job/Service to the customer in less possible time.

Service Type Templates

With standard procedures in place, the use of service type templates facilitates service operations by providing the list of suggested activities to be performed for a particular scenario e.g. 10,000 kilometer maintenance checkup.

Integration with Accounts Receivable Module

Upon completion of Sales processing or job/service orders, LAMP Enterprise automatically creates invoices. This ensure that sales revenue are immediately recorded and that all jobs are billed and collected.

Integration with other LAMP Enterprise Modules:

- Financials (General Ledger, Accounts Payable, Cash Management, Fixed Assets)
- Logistics and Operations (Web Ordering, Purchasing, Planning)
- Human Resources and Payroll

About LAMP Enterprise

LAMP Enterprise is developed by **Impart Solutions, Inc.** for companies in need of an affordable ERP solution. It is rich with premier enterprise level features, costs a fraction of the price and can be implemented in less time than a traditional ERP solution. It covers a wide range of industries catering to their requirements using best practices.

Availability

LAMP Enterprise is engineered to be a web-enabled application with PDA support in order for it to work on any platform using a web browser or internet-enabled mobile phones like Blackberry, iPhone, and SmartPhone. With

the wide availability of internet through DSL, WiFi, and 3G wireless networks, LAMP applications become always available.

Cost Efficient

LAMP follows the Software as a Service (SaaS) model that drives down costs normally assumed by the consumer. With LAMP, your enterprise application is hosted and maintained in a secure datacenter eliminating the need to invest a large amount on personnel, hardware, infrastructure, and maintenance for your applications.

LAMP offers a significant reduction in your Total Cost of Ownership (TCO) compared to other ERP systems.

Support

Not only do you get software, you get a team of professionals to handle your questions, maintain the system, and perform your backups. It's like having your own IT department without all the costs associated with it.

Flexibility

LAMP can be configured precisely to match the needs of each customer eliminating the need for large information technology investments.
